

There's a lot to be said about the AQUADEA Showerhead but the following are some very important maintenance tips:

## CARE INSTRUCTIONS

### CARE & GO

#### YOUR AQUADEA® SHOWERHEAD

**Your Showerhead is ready for use:** Simply unscrew your old showerhead from the shower hose and replace it with the new Aquadea Showerhead. You're ready to go! ■ **Enjoy the refined sprinkle of vortex water and the expansive clarity within the room.**

**Care tips** ■ Always dry the showerhead with a soft cotton cloth. This prevents residual calcium build up and minimizes scratches. ■ Regular emersion of the showerhead in warm lemonwater also removes calcium residue. (Do not use vinegar!)

■ For silver parts we recommend the following silver cleaner: „SilverFoam“: Your showerhead will not only shine but also be impregnated. You can easily order this product from us!

■ Due to the intense suction within the vortex cells clogging is prevented. Sometimes, however, certain dirt or rust particles are pulled up out of the water pipes. When this happens, unscrew the nozzle, clean the nozzle disk as mentioned above and rinse well.

#### **Practical Accessories**

■ To prevent dripping and contamination build up use our hose and plugin-coupler for the tap. With this convenient aid, residual water-flow can easily be drained off and the shower hose dried out.

■ If your shower handle doesn't fit into the shower rod, then there is a suitable **Adapter** which can be used.

■ Would you like to massage your own back? Our **shower extension**, with the fitting adapter is the solution for you! This can be easily mounted to suit every ergonomical form desired.

#### **A few more tips**

■ Take time to discover the ideal combination for your showering and bath experience! ■ **Revitalisation or Relaxation?** Experiment with the water pressure and discover the ideal intensity, so that you can determine when to revitalise or relax. ■ **Near or Far?** What do you prefer: to just stand under the shower or to have a stimulating massage? Guide your shower head along your body and especially along the reflex zones of the feet. Enjoy this effect! ■ **Savouring the water experience?** A bath tub full of swirled, vortex induced water: a few drops of olive oil dripped into the showerhead and then supplemented with essential aromas, produces and wraps you in a subtle and beautiful emulsion for skin and soul. Savour the experience! ■ Attach the shower grip via the practical clip to the edge of the bath tub and let your bath water flow gently into the tub.
